Re: Dominion Power Smart Meter Installations

Dear Editor,

This past week Dominion Power sent out a bulk mailing to its customers in the area about the crews that will be coming around installing their new "Smart Meters" in the area. The flier said the "Smart Meters will work hard for you". There are numerous things it did not say, for example:

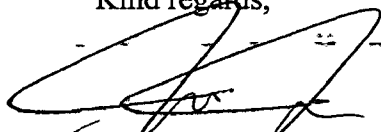

- These are "Radiation Performance Devices" that are supposed to be labeled as such but are not. In fact, no warning or option is readily given to the homeowner or residents to be exposed to this radiation, even though the radiation may often be greater than that produced by a microwave oven, which requires radiation warnings and does not turn on thousands of times a day. Please let this letter serve as the health hazard warning Dominion will not give you.
- The radiation from these meters is emitted almost constantly, and they add high frequency kilohertz band electromagnetic radiation to homes on which they are installed. Is your meter near any area in your home where you spend time? Do you live in a building with multiple units and a group of meters? If so, beware!
- The effects of this radiation are immediate for those with medical difficulties and subtle and cumulative for everyone else. It is projected that there will be millions of people who from chronic illness and life-threatening diseases caused by these devices given exposure over time. If you have a pacemaker, you are not required to have a microwave, but apparently as far as Dominion is concerned you are required to have their dangerous "Radiation Performance Device".
- "Smart Meters" are 5G information gathering devices, most likely made in China and running Chinese software. They are sending volumes of data back to Dominion and who knows who else so they can sell it or raise your electric rates based on your usage. Why does Dominion need to know when you are on wi-fi, who is home, where you go on the internet, what your cell phone and blue tooth activity is, and so on and so forth? Why do they need this info sent to their new billion-dollar headquarters in bursts of electromagnetic data sent out as often as several times a minute, day after day, year after year?

- “Smart Meters” cost about five hundred dollars each. The Virginia State Corporation Commission has told Dominion that the \$752 Million they want to spend on this over the next ten years to replace their perfectly good existing meters did not make sense for their customers, yet Dominion is apparently ignoring their regulatory authority and proceeding with their installation full speed ahead. At the same time, they are asking the SCC for a rate increase and guaranteed profits for their shareholders in return for making these unneeded investments. Who do you think will pay for this? If Dominion ignores the SCC, then let their investor’s pay, profits and guaranteed returns must end!
- Virginia OSHA refuses to regulate Dominion regarding installation of these “Smart Meters” creating a dangerous environment for the subcontractors who do the installations. Apparently, subcontractors are used because Dominion will not let their crews swap hot energized meters for safety reasons.
- Hundreds of communities have banned these “Smart Meters” for these and other reasons. Why don’t we? If Dominion cared about their customers and you wanted to be monitored like this you should have to knowingly opt in, not figure out how to opt out because you were not informed of the dangers.

I wrote Dominion a certified letter today telling them that these “Smart Meters” are not allowed on my property. I also wrote my local officials asking them for a ban and asking them to be sure the cost for this and Dominion’s other unjustified pie in the sky projects is paid for by their stockholders, and not their captive customers. You may want to consider doing the same.

Dominion does not need to know my personal info so they can charge me more for cooking dinner at dinner time or taking a shower in the morning, and they sure do not need to gather volumes of other real time and very personal data to sell or trade for profit. Keep that in mind when you get your fancy new Dominion 5G home monitoring “Smart Meter” that “will work hard for you” and watch what happens to your health and what little privacy you have left....

Kind regards,

A handwritten signature in black ink, appearing to read 'John Janson', with a large, sweeping flourish extending from the end of the signature.

Subject: Dominion Power Smart Meter Installations

Dear Mr. Janson:

We have received your correspondence addressed to Chairman Williams concerning Dominion Power Smart Meter Installations. We wanted to inform you that for informational purposes, we plan to create a Non-Docket in our Docket Management System (DMS) and place/scan your letter in this non-docket. Our DMS is made available to the public and so would your letter. However, we would redact any personal identification such as your street address, phone numbers and email address. If you have any issues concerning our doing so, please respond to this email as soon as possible.

Thank you and enjoy the rest of the afternoon.

Sincerely,

Tricia O. DeSanty
